

CHEMATIX™

Comprehensive Chemical Management System

Web Procurement

The most innovative feature of CHEMATIX™ is the ability to procure scientific chemicals and supplies via the web, from virtually any web-enabled device anywhere in the world. Search inventories and catalogs, order supplies, manage existing orders and generate a variety of reports in this powerful module.

Some of the highlights include:

- ability of laboratory personnel to conduct a web search of chemicals in chemical store/warehouse inventories, surplus inventories and on-line catalogues of affiliated vendors according to item description, catalog number or CAS number
- capacity to view item description, unit pricing, catalog number, CAS number and MSDS from on-line search of chemicals and supplies

- one click addition of selected items to build market basket from on-line supplier catalogues, university stores and/or surplus inventories
- ability to quickly add items to market basket from "Hot List", an intuitive order profile configurable according to specific business requirements
- special order capability, allowing procurement of chemicals and supplies from virtually any approved vendor

CHEMATIX™

Comprehensive Chemical Management System

Web Procurement

The continued highlights of the Web Procurement module include:

- ability to specify a purchase order (internal reference) number on market basket orders
- optional central processing and approval via administrative and financial personnel
- ability to upload business-specific supply catalogs containing itemized product listings for both affiliated vendors and campus stores
- ability to process credit card purchases from customers
- access to past orders and, if desired, resubmission of another order of the same items or select items from the previous order
- seamless transfer of purchasing data to and from existing enterprise financial applications

- capability to transmit special order items, non-stock items, and inventory replenishment orders by xCBL directly to contract suppliers
- complete order management and customer service options with the ability to search and report based on shopper name, e-mail address, account or customer number, customer purchase order number, or chemical store/warehouse invoice number
- optional generation of alerts to Environmental Safety personnel for purchase of extremely hazardous chemicals
